15 Minute UV Shoe Sanitizer
Kills Fungus & Bacteria That Can Infect — and Re-Infect — Your Feet
For ‘Microscopically Clean’, More Hygienic Shoes That Don’t Smell!

Shoes are warm, dark and damp — the perfect breeding ground for germs that can infect your feet and make them smell. More effective than sprays and powders that can leave a toxic residue, ShoeZap® is the fast, easy way to kill fungus and bacteria that cause Athlete’s Foot, Fungal Nails, Foot and Shoe Odor, Diabetic Infections and more. Keeps shoes ‘microscopically-clean’, more hygienic and safe to wear. One size Sanitizer fits all footwear styles and sizes, so ShoeZap® will disinfect every shoe in your home and family — Men’s, Women’s, Teens and Children. Shoes are the only article of clothing we never clean — until now.

Common Foot Problems and Solutions

**Corns:** Hardened spots of thickened skin on toes that protect skin and underlying bones from excess pressure and friction.

**Solutions:** Pads, cushions, files, change shoes that rub, add arch supports to footwear to redistribute forces and alter foot function.

**Calluses:** Hardened areas of skin that thicken to protect skin and underlying bones from excess pressure, friction.

**Solutions:** Pads, cushions, files, change shoes that rub, add arch supports or ball-of-foot pads to shoes to redistribute forces and alter foot function.

**Warts:** Round, colored, textured skin spots caused by a virus. Generally harmless, but sometimes sensitive to pressure.

**Solutions:** Pads, cushions, wart removers, professional treatment.

**Foot Odor:** Smelly shoes, socks and feet, often caused by bacteria and excess perspiration.

**Foot Fungus:** Athlete’s Foot causes skin itching, cracking, peeling and odor.

**Solutions:** Wash and dry feet thoroughly, wear and change socks frequently, change shoes regularly so they dry, add absorbent insoles to shoes, apply creams, powders and/or deodorants to feet, foot soaks to clean and deodorize.

**Bunions:** Thickening, deformity of the bone and/or inflammation of tissues around the big toe joint, sometimes accompanied by a crooked big toe.

**Solutions:** Pads and cushions can protect the sensitive bunion area or separate toes that rub. Wider shoes reduce shoe pressure and friction. Arch supports and lower heel heights ease foot strain that can contribute to bunions.

**Hammer Toes:** Flexible or rigid bent-under toes can cause toe-tip and toe-top corns, ball of foot pain.

**Solutions:** Pads, cushions, caps that straighten, support or protect toe tips and tops. Change to roomier shoes, add arch supports or ball-of-foot pads to footwear to redistribute forces and alter foot function.

**Crooked Toes:** Flexible or rigidly crooked toes can cause irritation and pain.

**Solutions:** Pads, cushions, caps, separators can help align flexible toes. Change to roomier shoes.

**Heel Pain:** Most often the result of a strain of the ‘plantar fascia’ ligament on the bottom of the foot, hence the medical term ‘plantar fasciitis’.

**Solutions:** Arch supports, heel cushions, stretching, night splints, massage, injections to reduce inflammation and patience — this can be a difficult condition to treat. Take action at the first sign of heel pain.

**Pump Bump:** Rubbing of the heel against the insides of shoes causes pain, blisters.

**Solutions:** Shoe pads, heel cushions, better fitting shoes.
**Neuroma:** Inflammation or benign growth of a nerve, most commonly at the base of the third or fourth toes.

**Solutions:** Change to roomier shoes, add arch supports or ball-of-foot pads to footwear to redistribute forces and alter foot function.

**Ball-of-Foot Pain:** Often the result of irritation to the foot bones or ‘metatarsals’, hence the medical term ‘metatarsalgia’. As we age, the natural ‘fat pad’ that protects our feet grows thinner, making us increasingly susceptible to this condition.

**Solutions:** Pads, cushions that provide extra protection or support. Change shoes, add arch supports or ball-of-foot pads to footwear to redistribute forces and alter foot function.

**Nail Fungus:** Common fungus gets under nails and spreads, causing discoloration (yellowish, brownish), flaking, thickening, discomfort, odor and embarrassment.

**Solutions:** If caught early, topical anti-fungal liquids can help improve nail appearance, but once the infection takes hold under the nail, these are less effective. Seek professional care — the sooner the better — the longer the infection has to get established, the more difficult it is to treat. New treatments are being tested, including lasers that kill the fungus, oral drugs (though these can cause side-effects) and new, more powerful liquids that can penetrate the nail bed.

**Diabetes:** Diabetes can cause neuropathy — a loss of feeling in the feet — making it hard to notice small sores. Diabetes can prevent small foot sores from healing. Foot sores that don’t heal are called ‘ulcers’. Ulcers that don’t heal can lead to foot and leg amputations.

**Solutions:** If you have diabetes, you MUST TAKE EXTRA GOOD CARE OF YOUR FEET. And if you know or love someone with diabetes, you’ll do them a great favor by volunteering to help. Quite often, people with diabetes are unable to perform some of these steps.

Inspect feet daily. Look for early signs of skin breakdown, including blisters, corns, calluses, reddened spots or areas. Wash feet every day & dry them thoroughly, especially between toes.

See a Podiatrist regularly for a professional foot inspection — at least once a year, twice or more if you have problems. Free foot screenings are widely available.

Make sure shoes fit properly — too small, too short, or too narrow can cause pressure spots. Don’t go barefoot. You can damage your feet too easily.

Take care of toenails. Trim them carefully and properly. Get help if you can’t do this yourself.

Don’t wear socks that restrict circulation, bunch, crease or cause sore spots.

Don’t self-treat foot problems with anything elastic or acidic.

The obvious: Control your blood sugar. Don’t smoke. Exercise regularly.
